

Sales Performance Review

Business Recommendations Report

Executive Summary

From analysis we found that true seasonal peaks are April and November. Then for 2021 and 2022 revenue were Rp91.96 billion and Rp93.74 billion. From sales team side, Online (Jakarta) sales team's revenue has nearly halved since 2020, the Sulawesi-Maluku region is still top generated revenue but has been declining for three straight years, and the Sumatera-Kalimantan team converts prospects roughly twice as efficiently as the team average.

Rp296.77bn Total revenue (2020–2022)	1,028 Total orders	Rp270.14M ↓ Avg. order value (2022)	34.77% Top region shares
--	------------------------------	---	------------------------------------

1. Business Context & Objective

This report aligned with data analysis objective that already mention before. The objectives were to determine how different product categories, unit prices, and discount strategies are influencing the overall transaction size. Also to assess the effectiveness of sales operations across regions and sales teams. Then to understand order patterns among B2B retail and distributor partners to encourage larger bulk orders.

2. Key Findings

2.1 Revenue trend and the real seasonal pattern

Annual revenue was Rp111.07 billion (2020), Rp91.96 billion (2021), and Rp93.74 billion (2022) — a 17.21% year-over-year decline in 2021, followed by a 1.93% recovery in 2022. Aggregated across all three years, April (Rp29.00bn) and November (Rp28.96bn) are consistently the strongest months, while September (Rp17.80bn) is consistently the weakest. The single highest month on record is November 2020 at Rp13.24 billion.

2.2 Regional revenue is concentrated and shifting

The Sulawesi, Maluku & North Maluku region still leads with 34.77% of revenue (Rp103.20bn), ahead of Sumatera & Kalimantan (22.99%), Jakarta (17.58%), Bali & Nusa Tenggara (12.54%), and Java (12.11%). But the year-by-year trend changes the story: the Online (Jakarta) team's revenue fell from Rp24.00bn (2020) to Rp11.86bn (2022) — a 50.6% decline — while Java grew 43.3% from 2021 to 2022 to reach its best year yet. Sulawesi-Maluku itself has declined 15.1% since 2020 despite remaining top, and Bali-Nusa Tenggara is down 15.8%. Only Sumatera-Kalimantan has grown consistently (+8.5% since 2020).

2.3 Average order value: a confirmed 3-year decline

AOV fell every year: Rp312.88 million (2020) → Rp282.09 million (2021) → Rp270.14 million (2022), a cumulative decline of 13.66%. This is a steady erosion rather than a single bad year, and order counts stayed in a narrow band (326–355/year), *confirming this is a value problem rather than a volume problem.*

2.4 Sales team efficiency varies sharply by prospect

Revenue per closed prospect ranges from Rp3.10 billion (Bali-Nusa Tenggara, despite having the most prospects at 12) to Rp11.37 billion (Sumatera-Kalimantan, from just 6 prospects) — nearly a 4x gap. Corporate Negotiation is both the highest-revenue promotion method (47.32% of revenue, Rp140.42bn) and the most efficient per prospect (Rp6.38bn), ahead of the blended Online Marketing/Corporate method (Rp5.79bn) and pure Online Marketing (Rp5.22bn).

2.5 Product & category performance, with a forecast warning

Bicycle (~37%), Gym & Fitness (28.35%) and Golf (23.26%) remain the top categories; together with Billiard and Hiking & Camping, these five “high-performing” categories generate 95.18% of all revenue. The five best-selling individual products (Road Bike, Stick Golf Bag, Bench Press, Treadmill, Mountain Bike) have each declined in revenue every year since 2020. Extrapolating that trend, a realistic forecast projects their combined revenue falling a further 34.1% by 2025 (to ~Rp44.5bn); an optimistic scenario assuming a modest 2% annual growth target would instead grow their combined revenue by 6.1% (to ~Rp71.6bn) — a roughly 40-percentage-point swing depending on whether action is taken.

2.6 Partner stores and the retail/distributor split

Of 50 active partner stores, the top 10 generate Rp81.78bn (27.6% of revenue) while the bottom 10 generate just Rp40.20bn (13.6%) — a meaningful gap between the best and weakest partners. Retail partners drive 90.79% of revenue (941 orders) versus 9.21% for distributors (87 orders). *Distribution is uneven by geography too: Bali and Sumatera are served entirely by distributors, while most other regions rely almost entirely on retail.*

3. Recommendations & Action Plan

- **Rebalance regional investment based on trend, not just size.** the Online (Jakarta) team's revenue has nearly halved since 2020 (-50.6%) while Java grew 43.3% in its most recent year. The suggestion is to diagnose the Online channel's decline before reallocating further investment, and continue supporting Java's momentum rather than treating it as a lagging region.
- **Treat the leading region as at-risk, not secure.** the top region is still top 1 but has fallen 15.1% since 2020, track it on a monthly cadence so a continued slide is caught early rather than masked by its still-large share.
- **Close the prospect-efficiency gap.** study what the Sumatera-Kalimantan team does differently to generate Rp11.37bn per prospect (nearly 4x Bali-Nusa Tenggara's Rp3.10bn), and apply those practices — likely Corporate Negotiation-style engagement — to the least efficient team.
- **Recover average order value.** pilot bundling and upsell offers to address the confirmed 3-year, 13.66% AOV decline; review discounting practices as a possible contributor.
- **Act on the product forecast now, while the gap is still closeable.** without a deliberate growth target, the top 5 products are projected to lose 34% of combined revenue by 2025; set and resource a 2%+ annual growth target for these products to instead capture the 6%+ upside the data shows is achievable.
- **Rebalance the partner network and plan for the real seasonal pattern.** review the bottom 10 partner stores (13.6% of revenue) for additional support or replacement, and plan inventory/staffing around the real peak months of April and November — with September as the confirmed low point.

Action Plan	Stakeholders	Timeline	Target KPI
Diagnose Online (Jakarta) team's decline	Regional Sales Ops	Q3	Halt further Quarter on Quarter revenue loss
Sustain Java team's 2022 momentum	Java Regional Manager	Q3–Q4	Grow Java's revenue share from 12.11% to 15%+
Monitor Sulawesi-Maluku region health	Sulawesi-Maluku Team Lead	Ongoing	Stabilize revenue $\geq$ Rp31bn/yr
Roll out Sumatera-Kalimantan's prospecting approach	Sales Enablement	Q3	Bali-Nusa Tenggara revenue/prospect: Rp3.10bn $\rightarrow$ Rp5bn+
AOV recovery: bundling & upsell pilot	Product & Marketing	Q3	Restore AOV to Rp300M+
Top-5 product growth plan (counter forecast decline)	Category Managers	Q4	Track to +6% (optimistic case) vs 2022 by 2025
Partner review + peak-season readiness (Apr & Nov)	Partnerships & Ops	Q4 / Mar & Sep prep	Bottom-10 stores +15% revenue; zero stockouts in peak months

Note :bn in this report is billion in currency data format.
